🔍 Abstract: **PURPOSE:** To obtain the subject deinking agent, containing a reaction product of a specific OH group-containing compound with a dicarboxylic acid (anhydride) as an active component and having high whiteness with few residual ink spots.

CONSTITUTION: The objective deinking agent containing a reaction product of (A) an OH group-containing compound represented by a compound prepared by adding average 10-50mol, preferably 20-30mol total amount of ethylene oxide and propylene oxide to an 8-22C higher fatty acid so as to provide 1-4, preferably 1-3 molar ratio of ethylene oxide/propylene oxide or (ii) an incomplete ester of a polyhydric alcohol with the 8-22C higher fatty acid obtained by adding average 10-50mol, preferably 20-35mol total amount of ethylene oxide and propylene oxide so as to afford 1-4, preferably 1-3 molar ratio of ethylene oxide/ propylene oxide with (B) a dicarboxylic acid (anhydride) (e.g. maleic anhydride) as an active component.
